Name: Honglin Liu

GT login: hliu686

A team contract is an agreement between you and your teammate(s) to establish a set of conventions about how your team will operate. Ideally, it ensures a smooth team experience — think back to good or bad aspects of past team projects when negotiating it.

Your contract should answer questions such as the following:

1. How will you communicate outside of meetings (Zoom, phone, email, Slack, etc.)?
2. How will you manage your code? (git, SVN, etc.)?
3. If someone on the team decides to drop the class, what obligations do they have to their teammates?
4. How will work be divided among team members?
5. What expectations regarding team grade do team members have? If there are differences, is it acceptable for some team members to do more or less work than the others?

If your team has problems working together, and you have little in your team contract, it will be more difficult for the course staff to help you. Your TA will review your team contracts and let you know of any concerns we see.

Contract main text

1. We'll meet in person daily in our offices.
2. We'll share the code using Git-Hub.
3. If someone decides to drop the class, he/she should still attend every group meeting and get involved in coding work.
4. The working load to everyone in this team will be equally distributed.
5. Team members expect same team grade with the equally distributed work load. If one team member should reduce the workload because of personal issues, he/she should obtain the approval of whole group and accept the possible lower grade.
